U.S. Filing Date: January 9, 2002

For: **METHOD FOR AUTHENTICATING A PORTABLE  
OBJECT, CORRESPONDING PORTABLE OBJECT,  
AND APPARATUS THEREFOR**

McLean, Virginia

**PRELIMINARY AMENDMENT**

Assistant Commissioner for Patents  
Washington, D.C. 20231

Sir:

The following amendments and remarks are submitted prior to examination of the above-identified application on the merits.

**IN THE SPECIFICATION**

After the title and before the first paragraph [0001], insert the following:

**--BACKGROUND OF THE INVENTION**

1. **Field of the Invention.**

This invention relates to product security, and more particularly to a system and method for verifying the authenticity of a product or service in connection with a personal, business, or commercial transaction.

2. **Description of the Related Art.--**

10030255-010902

Page 1, before paragraph [0004] insert the following header:

--SUMMARY OF THE INVENTION--;

Page 3, before paragraph [0009], insert the following header:

--BRIEF DESCRIPTION OF THE DRAWINGS--;

Page 3, before paragraph [0010], insert the following header:

--DESCRIPTION OF THE PREFERRED EMBODIMENTS--;

Page 11, end of page, insert a new paragraph [0040]:

10030255.010902  
20061010 5520507

--[0040] While this invention has been described in conjunction with specific embodiments thereof, it is evident that many alternatives, modifications and variations will be apparent to those skilled in the art. Accordingly, the preferred embodiments of the invention as set forth herein, are intended to be illustrative, not limiting. Various changes may be made without departing from the true spirit and full scope of the invention as set forth herein and defined in the claims.—

10330255-010902  
205070-55202001

Page 12, after the last line, insert the following:

--I claim:--

**IN THE CLAIMS**

Please substitute amended claims 1-15 as presented below for the same-numbered claims that were pending prior to the filing of this paper. A marked-up version of the amended claims is attached.

10030255 040901

1           1.       (Amended) A method for authenticating a portable object including  
2 information processing means and information storage means, the information  
3 storage means containing at least one code defining operation steps capable of  
4 being executed by the portable object, as well as a one-way function, comprising  
5 sending the portable object an order for executing a calculation of a result by  
6 applying to said one-way function at least part of said code and using said result to  
7 decide whether or not the portable object is authentic.

1           2.       (Amended) A method according to claim 1, wherein said result enters  
2 into the implementation of a predetermined operation, said operation being  
3 performed successfully only when the portable object is authentic.

1           3.       (Amended) A method according to claim 2, wherein said predetermined  
2 operation comprises a decryption operation, said result making it possible to produce  
3 an associated decryption key.

1           4.       (Amended) A method according to claim 1, wherein said part of said  
2 code used in the calculation, comprises a machine code.

1           5.       (Amended) A method according to claim 1, wherein the portable object  
2 contains a real code defining operations designed to be executed by the portable  
3 object, and a dummy code defining operations not designed to be executed by the  
4 portable object, said code used in the calculation of a result comprising a dummy  
5 code.

1           6.     (Amended) A method according to claim 1, further comprising  
2 repeatedly sending said order to the portable object during its life, prior to execution  
3 by the portable object of said operation steps.

1           7.     (Amended) A method according to claim 1, wherein said code used in  
2 the calculation is defined by a start address and an end address in the information  
3 storage means, and further including the step of sending said start and end  
4 addresses to the portable object.

1           8.     (Amended) A method according to claim 1, wherein said code  
2 comprises a set of binary words, said code used in the calculation being defined by a  
3 subset of said binary words comprising binary words distributed in the information  
4 storage means at a determined pitch, said pitch being sent to the portable object.

1           9.     (Amended) A method for having a portable object execute a sensitive  
2 operation, the portable object comprising information processing means and  
3 information storage means, comprising: storing in the information storage means at  
4 least one code defining operations capable of being executed by the portable object,  
5 as well as a one-way function, and sending the portable object an order so that the  
6 portable object executes a calculation of a result by applying to said one-way  
7 function at least part of said code, said result entering into the implementation of said  
8 sensitive operation, said operation being performed successfully only when the  
9 portable object is authentic.

1           10. (Amended) A method according to claim 9, wherein the code part used  
2 in the calculation comprises a machine code.

1           11. (Amended) A method according to claim 9, wherein the portable object  
2 contains a real code defining operations designed to be executed by the portable  
3 object, and a dummy code defining operations not designed to be executed by the  
4 portable object, said code part used in the calculation comprising a dummy code.

1           12. (Amended) A portable object, comprising: information processing  
2 means, information storage means, the information storage means containing at  
3 least one code defining operations capable of being executed by the portable object,  
4 as well as a one-way function, and means for executing a calculation of a result by  
5 applying to said one-way function at least part of said code.

1           13. (Amended) A portable object according to claim 12, wherein said code  
2 part used in the calculation comprises a machine code.

1           14. (Amended) A device comprising: information processing means,  
2 information storage means, said information processing means designed to  
3 communicate with a portable object in order to authenticate the portable object, the  
4 portable object comprising: information processing means, information storage  
5 means, the information storage means of the portable object containing at least one  
6 code defining operations capable of being executed by the portable object, as well  
7 as a one-way function, and means for sending the portable object an order so that

8 the portable object executes a calculation of a result by applying to said one-way  
9 function at least part of said code of the portable object.

1 15. (Amended) A device according to claim 14, wherein said code part  
2 used in the calculation comprises a machine code.

20601015500001

Docket: T2146-907683-US 3879/BC

**IN THE ABSTRACT**

Please replace the Abstract as originally filed with the following new abstract:

200010 5520207

--ABSTRACT

A method for authenticating a portable object includes an information processing means and an information storage means. The information storage means contains at least one code defining operations capable of being executed by  
5 the portable object, as well as a one-way function. The method comprises sending the portable object an order so that the latter executes a calculation of a result by applying to said one way function at least part of said code. This result is used to decide whether or not the portable object is authentic.--

1030255.010902

REMARKS

Claims 1-15 are pending. These claims have been amended to place them in a form which comports with established U.S. claim practice. Also, the specification has been amended to include section headers, and a new abstract has been provided.

It is respectfully submitted that the application is in condition for allowance. Favorable consideration and prompt allowance of the application is respectfully requested.

Should the Examiner believe that further amendments are necessary to place the application in condition for allowance, or if the Examiner believes that a personal interview would be advantageous in order to more expeditiously resolve any remaining issues, the Examiner is invited to contact Applicant's undersigned attorney at the telephone number listed below.

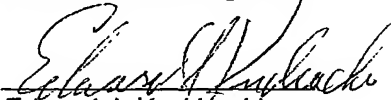

To the extent necessary, Applicant petitions for an extension of time under 37 CFR § 1.136. Please charge any shortage in fees due in connection with this application, including extension of time fees, to Deposit Account No. 50-1165 (Attorney Docket No. T2146-907683) and credit any excess fees to the same Deposit Account.

Respectfully submitted,

Miles & Stockbridge P.C.

10030255-010902

**Marked-Up Version of the Amended Claims**

10030255.010902

1           1.       (Amended) [Method] A method for authenticating a portable object [(7)  
2 comprising] including information processing means [(8)] and information storage  
3 means [(9, 10)], the information storage means containing at least one code [(i)]  
4 defining [operations] operation steps capable of being executed by the portable  
5 object, as well as a one-way function, [characterized in that it comprises the step that  
6 consists of] comprising sending the portable object an order [(31, 32i-34i, 35, 36) so  
7 that the latter executes a] for executing a calculation of a result by applying to said  
8 one-way function at least part of said code [(i)], [this] and using said result [being  
9 used] to decide whether or not the portable object is authentic.

1           2.       (Amended) [Method] A method according to claim 1, wherein said  
2 result enters into the implementation of a [given] predetermined operation, [this] said  
3 operation being performed successfully only when the portable object [(7)] is  
4 authentic.

1           3.       (Amended) [Method] A method according to claim 2, wherein said  
2 [given] predetermined operation comprises a decryption operation, said result  
3 making it possible to produce an associated decryption key.

1           4.       (Amended) [Method] A method according to claim 1, wherein said part  
2 of said code [part (i)] used in the calculation, comprises a machine code [part].

1           5.     (Amended) [Method] A method according to claim 1, wherein the  
2     portable object [(7)] contains a [so-called "real"] real code defining operations  
3     designed to be executed by the portable object, and a [so-called "dummy"] dummy  
4     code defining operations not designed to be executed by the portable object, said  
5     code [part] used in the calculation of a result comprising a dummy code [part].

1           6.     (Amended) [Method] A method according to claim 1, [wherein said  
2     order (31, 32i-34i, 35, 36) is sent] further comprising repeatedly sending said order to  
3     the portable object [repeatedly] during its life, prior to [the] execution by the [latter]  
4     portable object of said [operations] operation steps.

1           7.     (Amended) [Method] A method according to claim 1, wherein said  
2     code [part (i)] used in the calculation is defined by a start address [(32i)] and an end  
3     address [(33i)] in the information storage means, and further including the step of  
4     sending said start and end addresses [being sent] to the portable object.

1           8.     (Amended) [Method] A method according to claim 1, wherein said  
2     code [(i)] comprises a set of binary words, said code [part] used in the calculation  
3     being defined by a subset of said binary words comprising [the] binary words  
4     distributed in the information storage means at a determined pitch [(34i)], said pitch  
5     being sent to the portable object.

1           9.     (Amended) [Method] A method for having a portable object [(7)]  
2     execute a sensitive operation, the portable object comprising information processing  
3     means [(8)] and information storage means [(9, 10)], comprising: storing in the

4 information storage means [containing] at least one code [(i)] defining operations  
5 capable of being executed by the portable object, as well as a one-way function, and  
6 [characterized in that it comprises the step that consists of] sending the portable  
7 object an order [(31, 32i-34i, 35, 36)] so that the [latter] portable object executes a  
8 calculation of a result by applying to said one-way function at least part of said code  
9 [(i)], said result entering into the implementation of said sensitive operation, [this]  
10 said operation being performed successfully only when the portable object [(7)] is  
11 authentic.

1 10. (Amended) [Method] A method according to claim 9, wherein [said]  
2 the code part [(i)] used in the calculation comprises a machine code [part].

1 11. (Amended) [Method] A method according to claim 9, wherein the  
2 portable object contains a [so-called "reel"] real code defining operations designed to  
3 be executed by the portable object, and a [so-called "dummy"] dummy code defining  
4 operations not designed to be executed by the portable object, said code part used  
5 in the calculation comprising a dummy code [part].

1 12. (Amended) [Portable] A portable object, comprising: information  
2 processing means, [(8) and] information storage means [(9, 10)], the information  
3 storage means containing at least one code [(i)] defining operations capable of being  
4 executed by the portable object, as well as a one-way function, [characterized in that  
5 it comprises] and means for executing a calculation of a result by applying to said  
6 one-way function at least part of said code.

1           13.    (Amended) [Portable] A portable object according to claim 12,  
2    wherein said code part [(i)] used in the calculation comprises a machine code [part].

1           14.    (Amended) [Device (1)] A device comprising: information processing  
2    means, [(2) and] information storage means [(3, 4) and] , said information processing  
3    means designed to communicate with a portable object [(7)] in order to authenticate  
4    the [latter] portable object, the portable object comprising: information processing  
5    means, [(8) and] information storage means [(9, 10)], the information storage means  
6    of the portable object containing at least one code [(i)] defining operations capable of  
7    being executed by the portable object, as well as a one-way function, [characterized  
8    in that it comprises] and means for sending the portable object an order [(31, 32i-34i,  
9    35, 36)] so that the [latter] portable object executes a calculation of a result by  
10   applying to said one-way function at least part of said code [(i)] of the portable object.

1           15.    (Amended) [Device] A device according to claim 14, wherein said  
2    code part [(i)] used in the calculation comprises a machine code [part].

**PROPOSED DRAWING CORRECTIONS**

Hon. Commissioner of Patents and Trademarks  
Washington, D.C. 20231

Sir:

Applicant requests approval of the drawing corrections on Figs. 1 – 4 as  
shown in red on the attached two (2) sheets.

The proposed corrections only comprise translation of the French terms in the  
blocks to correspond the drawings to the specification and claims and removing the  
headings "1/2" and "2/2" to correspond the drawings to U.S. practice..

Respectfully submitted,

Miles & Stockbridge P.C.
